**DETAILED ACTION**

***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5 and 13-15, drawn to a method of providing a tailored-made equalizer for an instrument comprising using a microphone for picking up sounds of the instrument and creating an equalizer that compensates for the difference between a reference sound and the picked up sound, classified in class 381, subclass 58.
- II. Claims 6-12, drawn to a method of providing a tailored-made equalizer for an instrument comprising using two microphones to pick up sounds from the instrument and recording the sounds to subsequently create an equalizer which equalizes the two sounds, classified in class 381, subclass 56.
- III. Claims 16-24, drawn to a system for sound reproduction of musical instruments comprising using two microphones to pick up sounds from multiple instruments and creating a digital filter algorithm, classified in class 381, subclass 98.
- IV. Claims 25 and 27, drawn to an equalizer system having low-pass and high-pass filters, classified in class 381, subclass 99.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have a different number of microphones. As a result, invention II will have a different effect with respect to its reference signals because they are derived from a microphone.

Inventions III and I or II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, inventions I and II are directed to a system for one instrument. Invention III recites plural instruments.

Inventions (I or II or III) and IV are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the equalizer components are not relevant to its function of equalizing a reference signal and a microphone signal. The subcombination has separate utility such as an ordinary equalizing circuit.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
